

### Space Solutions Refurbish New Premises for Goba Resources

Space Solutions has completed a turnkey refurbishment of new Aberdeen premises for growing international engineering consultants and recruitment specialists, Global Resources. The company, who recently announced a successful first year trading with turnover of £23m, marked the anniversary with the relocation to larger premises for their staff of 70.

The company was established in 2005 to provide specialist consultancy services to the Oil and Gas industry and has experienced rapid growth following the acquisition of Maris Subsea and Global Material Services. These developments triggered a requirement for larger, more suitable premises, which were identified at In-Spec House on Wellheads Industrial Estate in Dyce.

Bill Hamilton, chief executive of Global Resources commented, "We sourced a building which was in the ideal location, in proximity to Aberdeen Airport, but the interior left a lot to be desired. We called in Space Solutions to get some ideas on what could be done to improve things. 14 weeks and £200K later we moved into modern, open plan premises, which fulfil all our requirements. We could hardly believe the transformation."

Space Solutions undertook the complete refurbishment of the premises from design and space planning to project management and the delivery of the refurbishment works. This culminated in the relocation of the business which was planned and managed over a weekend to avoid interruption to services.

Steve Judge, managing director at Space Solutions said, "Global Resources took on board our comments about future proofing and really making their premises work for their business. The newly refurbished offices give the right balance between open plan and cellular space, with specific requirements for meeting and training space also incorporated. I'm sure anyone visiting the premises would agree that it reflects the company and their way of working and provides a suitable headquarters for the growing resources group."

Space Solutions regularly undertake similar projects from their offices across Scotland, where the company now employs 80 personnel. Space Solutions is in the unique position of being able to offer a full range of property services from architecture and space planning to relocation and logistics packages - which allow clients to find totally integrated solutions to make the best use of their chosen commercial space.
